## Setup

To create a new [cpanel.beacontechonology.com](https://cpanel.beacontechonology.com) server follow these steps:

1. Set up a fresh CentOS 7 minimal.
2. `yum install -y screen`
3. run `screen`
4. Inside screen, update the server with: `yum update -y; sync; sleep 1; reboot`
5. Disable NetworkManager by following this guide: [Click Here](#)
6. Install cPanel by following this guide: [Click Here](#)
7. Transfer the `.tar.gz` file somewhere to the box
8. Go to this [article](#) to see your restore options
9. Update DNS if you have a different IP
